SUMMARY

Software Engineer specializing in C#, .NET, ASP.NET Core, backend architecture, and enterprise application modernization. Experienced in building RESTful APIs, optimizing database performance, improving system reliability, and developing secure applications for financial services, ERP, and transaction-processing systems. Strong foundation in modular architecture, distributed systems, cloud services, transactional consistency, and automated testing, with a focus on maintainable software and measurable business impact.

TECHNICAL SKILLS

Languages: C#, SQL/T-SQL, Python, JavaScript, TypeScript
Backend Development: .NET, .NET Core, ASP.NET Core, RESTful APIs, Blazor, Entity Framework Core, Dapper, Dependency Injection
Architecture & Design: Microservices, Modular Monoliths, Clean Architecture, SOLID, Domain-Driven Design (DDD), CQRS, Design Patterns, Event-Driven Architecture
Databases & Messaging: SQL Server, PostgreSQL, MongoDB, Redis, Kafka, Query Optimization, Indexing, Stored Procedures
Cloud & DevOps: AWS (Lambda, EC2, S3, RDS), Azure Functions, Azure App Service, Docker, Kubernetes, GitHub Actions, Azure DevOps, CI/CD
Security & Reliability: OAuth 2.0, JWT, Role-Based Access Control (RBAC), Transaction Management, Transactional Outbox, Background Jobs, Logging, Monitoring, Production Troubleshooting
Testing & Engineering Practices: Unit Testing, Integration Testing, Architecture Testing, Automated Testing, Git, Code Reviews, Agile/Scrum
Additional Technologies: SignalR, React, Angular, LLM API Integration, Retrieval-Augmented Generation (RAG)

PROFESSIONAL EXPERIENCE

Software Engineer | Better & Best Inc.
Oregon, Wisconsin, USA | April 2026 – Present

- Develop and maintain C#/.NET backend services for POS, billing, and order-processing workflows using ASP.NET Core, AWS, and SQL.
- Refactor legacy application components to improve maintainability and support incremental modernization while preserving existing business operations.
- Build RESTful APIs and AWS Lambda functions using C# and Dapper to integrate application workflows with cloud services and data sources.
- Optimize SQL queries, indexes, and data-access patterns to improve transaction-processing performance and database reliability.
- Troubleshoot production issues across application, API, and database layers, identifying root causes and implementing targeted fixes.

Senior Software Engineer | Sahakrinpheap Microfinance PLC
Phnom Penh, Cambodia | September 2021 – May 2024

- Modernized legacy banking applications by decomposing monolithic components into C#/.NET and ASP.NET Core microservices, contributing to a 40% reduction in system crashes.
- Developed event-driven monitoring and alerting services on Azure, improving incident response by 50% and supporting 99% system uptime.
- Optimized SQL Server and PostgreSQL queries, indexes, and stored procedures, reducing critical query execution times from minutes to seconds.
- Automated payroll and attendance workflows, reducing monthly manual processing time by seven days.
- Implemented API authentication and authorization using OAuth 2.0, JWT, and role-based access control; mentored engineers through code reviews and technical guidance.

Software Engineer | Pathmazing Inc.
Phnom Penh, Cambodia | March 2021 – September 2021 | Full-time

- Developed secure C#/.NET APIs integrating enterprise applications with third-party payment services, contributing to a 30% improvement in transaction reliability.
- Built ERP backend services and optimized SQL queries and reporting pipelines, reducing execution time from approximately 30 minutes to five minutes.

Software Engineer | Anakut Digital Solution Co., Ltd.
Phnom Penh, Cambodia | October 2020 – May 2021
Full-time initially; part-time from March to May 2021

- Developed C#/.NET backend services for POS and ERP platforms, automating workflows and reducing manual data-entry errors by 99%.
- Built RESTful APIs and SignalR features for system integration and real-time reporting, improving application responsiveness by 45%.

Software Engineer | Arrow Dot
Phnom Penh, Cambodia | October 2019 – October 2020

- Developed and maintained business applications and RESTful APIs using C#, .NET, JavaScript, and SQL.
- Optimized database queries and supported Docker-based deployments, CI/CD workflows, code reviews, and production troubleshooting.

SELECTED PROJECTS

Open ERP | C#, .NET 10, Blazor, PostgreSQL, Docker, Testcontainers

- Developed a modular ERP platform supporting multi-company operations, role-based permissions, CRM, sales, purchasing, inventory, double-entry accounting, financial reporting, and CSV exports; implemented transactional audit records, outbox processing, background jobs, and automated unit, integration, architecture, and browser tests.

Job Tracker API | C#, .NET, Microservices, CQRS, Docker

- Designed a service-oriented job-tracking platform with an API gateway and dedicated services for users, jobs, and application workflows, applying CQRS and domain-driven design to improve separation of concerns and maintainability.

AI-Powered Portfolio | C#, .NET, MongoDB, LLM Integration, RAG

- Built a C#/.NET backend for an AI-powered portfolio with RESTful APIs, visitor and contact management, keyword-first retrieval with semantic fallback, bounded LLM context, streaming responses, dependency injection, health checks, and automated tests.

Angkor Milk Meal App | SQL, Database Optimization, Reporting

- Optimized SQL queries and reporting workflows for a meal-management application serving more than 500 users, improving access to operational data and application responsiveness.

EDUCATION

Master of Science in Computer Science
Maharishi International University | Fairfield, Iowa, USA
May 2024 – Expected December 2026

Bachelor of Science in Computer Science and Engineering
Royal University of Phnom Penh | Phnom Penh, Cambodia
November 2016 – November 2020

HONORS

Best Project & Team Effort of the Year — Khmer Care
Pathmazing Inc. | June 2021
